

BREAKOUT SESSION CAM2 GROUP

BREAKOUT TOPIC 1: What should the highest priorities be for designing the high-resolution UFS applications?

1. Share metrics from verification/validation workshop for CAM with community
2. Benefits outweigh any possible degradation
3. Optimizing ensemble configuration/performance (spread/skill) as we transition from HREF to UFS framework
4. Timeliness - minimizing product latency
5. Data availability and visualization (IT and social science issue)

BREAKOUT TOPIC 2: How can customers and stakeholders be more involved and engaged in UFS development?

1. Need to better communicate a common and consistent terminology and structure (coms and outreach?)
2. Identify all the potential stakeholders that need to provide input
3. Mechanism for gathering feedback on model performance and data analytics to synthesize
4. Improving model evaluation procedures
5. Data availability and visualization (IT and social science issue)
