

# GFSV16 Impact on NCEP Operational Hurricane Model Forecast Systems (HWRF/HMON)

Zhan Zhang

(on behalf of the EMC Hurricane Project Team)

Environmental Modeling Center,  
NCEP/NOAA/NWS, NCWCP, College Park, MD 20740.

October 01, 2020

# HWRF/HMON Downstream Upgrades for GFSV16 and RTOFS

- Upstream data input: GFSV16 (Feb. 2021) and RTOFS (Nov. 2020)
- H221/M221: HWRF/HMON driven by GFSV16 and RTOFS
- H220/M220: Current operational HWRF/HMON
- Experiment Period: Most of the TCs in 2018-2020 for NATL, 2019-2020 for EPAC

# H221: HWRF (with GFS v16) vs H220: Operational HWRF

## Track Forecast Skill

MODEL FORECAST – TRACK FORECAST SKILL (%) STATISTICS  
VERIFICATION FOR NORTH ATLANTIC BASIN 2018–2020

NATL

## Intensity Forecast Skill

MODEL FORECAST – INTENSITY RELATIVE SKILL (%) STATISTICS  
VERIFICATION FOR NORTH ATLANTIC BASIN 2018–2020

Larger POD and  
smaller FAR

# GFSV16 Downstream Impact on Hurricane Forecast Models

## Impact on HWRF

	Track Forecast	Intensity Forecast	P-W relationship	RI POD/FAR
NATL	Positive at all lead times (~5%)	Positive at most of the lead times, except for marginally negative at day 1 and 5.	Improved	Improved POD/FAR
EPAC	Significantly positive at all lead times, >20% at day 4-5	Neutral overall. Negative between hrs 30-60 but positive for longer lead times at Days 3-5.	Neutral	Degraded POD/FAR

## Impact on HMON

	Track Forecast	Intensity Forecast	P-W relationship	RI POD/FAR
NATL	Negative at all lead times after day-1 (<~5%)	Positive at all lead times, ~10% between day 2-4	Improved	Degraded POD Neutral FAR
EPAC	Significantly positive after day 1, >10% at day 4-5	Neutral before day 3, Significantly positive at day 4 and 5 (>20%)	Improved	Improved POD/FAR

Note: H221/M221 Produce stronger storms than H220/M220
